ARCORA® COPPER SYSTEMS

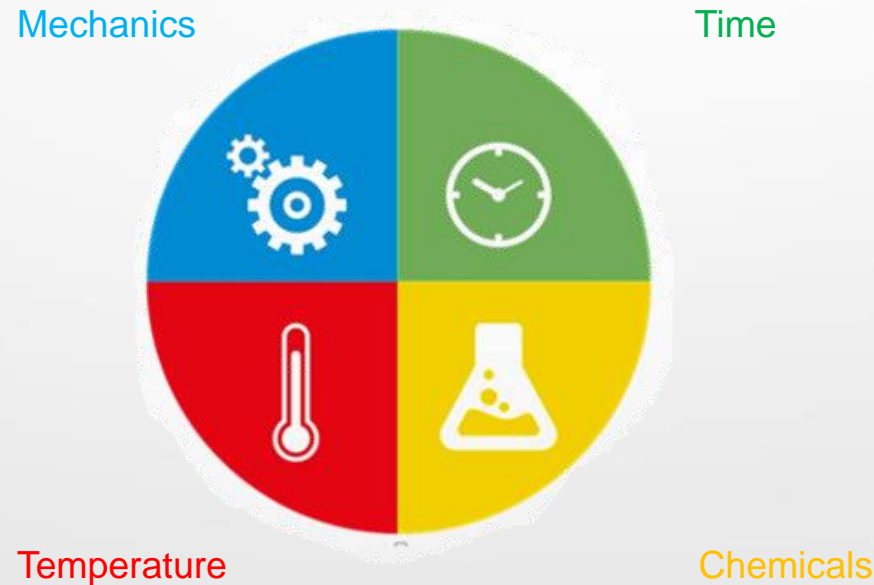

Copper

Copper has a Mohs' hardness of 2.5 to 3 and is therefore one of the soft metals. Even stubborn dirt is carefully removed by the fine copper threads. The copper products are particularly suitable for the gentle cleaning of pots, pans, sinks, fittings, enamel, glass, mirrors, stainless steel, ceramic hobs etc.

The Sinner's Circle

- The 4 factors can each be compensated by the others
- If I use a lot of time but little chemistry, the result can be the same as with a lot of chemistry and a short time.
- The 4 factors are dependent on each other, but their sum is always constant.
- The perfect balance is essential for successful cleaning or disinfection.

ARCORA[®] Copper products

Copper sponge

Knitted copper cloth with sponge core

Colour:

Grey

Size:

11 x 6,8 x 2,8 cm

Weight:

ca. 21 g

Material:
