## INFRARED HEATING TABLES - ENJOY COOL EVENINGS OUTDOORS

### For a cozy atmosphere despite low temperatures

With ARCORA® infrared heating tables, there is no need to miss out on spending time outdoors on cooler days. By placing the infrared heater in the table leg, the heat rises upwards and is beneficial for the whole body. Despite freezing temperatures, these heating tables produce an even heat instantly at the touch of a button, creating a cozy and comforting atmosphere in your outdoor space. The table leg always remains cool despite the heater and thus does not pose a risk of burns.

Due to corrosion-resistant material, it is possible to leave the tables outdoors.

The table surfaces can also withstand high demands such as sun, rain, ash or grease.

As a modern stainless steel table with wooden table surfaces, the tables appear trendy unlike traditional tables and add a beautiful modern look to the environment.

article-no.:	units
TP7070BR	1 pcs

Socket with hinged cover

1800 W

Infrared produces a quick and pleasant warmth. The infrared radiation hits surfaces, is absorbed and then converted into pleasant warmth that can be felt immediately. This warms not only the feet and thighs, but also the upper body. The infrared light waves are sent several meters away. Therefore, the heat is still perceptible several meters away from the table.

Heat control via 2 stages

Table surface colour

- immediate heat generation after switching on
- soothing warmth
- no dust whirling up
- noise-free and odorless
- easy to install
- energy-saving
