

# CARBON NEUTRAL PRODUCT

ARCORA® International GmbH supports the following UN goals for sustainable development:

## ARCORA® International GmbH Product „PU-PAD® 2022“

Participant ID: DE-2875-0505

This certificate guarantees that the reported quantity of 9 tons CO<sub>2</sub> has been saved in Gold Standard and VCS tested climate projects.

ARCORA® International GmbH has acquired shares (certificates) in climate protection projects corresponding to the calculated volume of 9 tons CO<sub>2</sub> to offset the carbon emissions of “PU-PAD® 2022”, and therefore plays a transparent part in the realisation of the projects. This ensures that the company compensates for its own CO<sub>2</sub> emissions, and thus scales back the rise in global warming.

The projects have been certified, and the issue and closure of the certificates is registered transparently.

ARCORA® International GmbH is therefore a voluntary participant in emissions trading, and thus makes a contribution to maintaining a viable environment by reducing the emissions of greenhouse gases. The holder of this certificate makes a sustainable contribution to the commitment to tackle global warming.

## ARCORA® International GmbH supporting climate protection projects:

### Zorlu Enerji Wind project

#### Pakistan

The Zorlu 56.4 MW Wind Farm Project will contribute to local sustainable development in the project area by exerting the following effects:

**Economic development:** Pakistan is currently facing acute energy supply bottlenecks. The project activity is expected to generate an estimated amount of 159,010 MWh per year and will therefore contribute to a reduction in the number of black-outs and brown-outs experienced by other Pakistani grid users. This can help to improve the economic performance of other businesses connected to the grid and supports economic growth in Pakistan.

**Social development:** The project will offer job opportunities for local people during the construction phase and the operational period, thus creating income opportunities and contributing to a higher living standard in the region.

**Environmental development:** By avoiding air pollution from fossil-fuel power plants and reducing greenhouse gas emissions significantly, the project has positive effects for the local environment and improves Pakistan's climate balance.

**Technological development:** The project activity is the first of its kind in Pakistan. By adopting foreign manufacturer wind turbines, the project initiates an important transfer of technical know-how to Pakistan, and can act as a pioneer in promoting the spread of this technology to other wind power projects in this country.
